

Instructions

Step

1

Open comic life.

Step

2

Choose a layout. Drag the desired layout over to the main screen. I would recommend sticking to the rectangular squares, the diamond and other odd shaped boxes can be difficult to manipulate.

Step

3

Drop and drag your pictures into the desired box. You can then shift them around and resize them by grabbing them by the corner.

Step

4

Add speech or thought bubbles by dragging them up into the main screen. Then add text and resize the text until it looks perfect.

Step

5

Save your comic.

Step

6

final result

To save as a pdf go to "print" and click on save as pdf. You cannot export the comic as a pdf. You can export it as a jpg however you have no idea how large it will print out when you email it to other people.
